

GemBreak Creator Growth Engine — Full Campaign Operating Plan

Compiled 2026-07-20. A hybrid influencer/UGC program: a performance-based **affiliate flywheel** that feeds a **paid-amplification** engine, run by a small human+AI team. Built on the graded creator dataset (1,273 verified ≥5K + 2,325 nano) and 2026 benchmark research.

0. Strategic thesis — "don't pay for reach, pay for proven performance, then amplify it"

Most brands burn budget paying big creators up front for a post and hoping it converts. The cutting-edge model in 2026 inverts that:

1. **Engine 1 — Affiliate flywheel (low-risk, volume):** put GemBreak in the hands of **many** creators on a **commission-only** basis (unique promo code + tracked link). Cost scales only with results.

1. **Engine 2 — Paid amplification (high-leverage):** the affiliate data tells you **which** creators and **which** videos actually drive signups and pack sales. You then ****license and whitelist only those proven winners**** and put ad dollars behind them (TikTok Spark Ads / Meta Partnership Ads), which run **30–50% cheaper CPA and ~5× ROAS** vs. brand-handle ads.

The flywheel: ****Affiliate seeds → performance data → amplify winners → their success recruits more creators → repeat. Selection is by value, not follower count**** (see §2). Positioning is **collectibles/mystery-pack unboxing** (the cheapest legitimate framing — see PRICING_AND_DEALS_2026.md).

1. How the best brands run this (benchmark synthesis)

- **Whitelisting/Spark Ads:** creators authorize the brand to run ads **through the creator's own handle** — native, high-trust. Delivers **30–50% lower CPA**, TikTok reports ****+142% engagement / +30% completion vs in-feed ads; agencies report 5×+ ROAS**** on whitelisted winners.

Golden rule: only amplify content that already proved itself organically.

- **Affiliate structure:** DTC standard is **tiered commission — 5–10% base climbing to 15–20%** for top performers, tracked by **promo code + link, 30-day attribution**, with ****first-touch/ multi-touch**** models favored for content creators (last-click under-credits top-of-funnel creators).

- **Operations:** winners run a **seed-to-scale pipeline** — hundreds of low-cost tests → performance tiering → top 5–10% become a **"Creator Council"** (long-term partners). A **CRM pipeline** (Cold → Contacted → Shipped → Engaged → Paid → Council) with automated stage triggers is how teams handle 25–50+ creators/month. With automation, **prospect → activated partner ≈ 90 days**; without, 4–6 months.

_

2. The Value Partner Score (VPS) — selecting the *most valuable*, not the most-followed

Follower count is the weakest predictor of ROI. VPS ranks creators on what actually drives pack sales. Each creator scores 0–100:

Factor	Weight	What it measures	Data source
Niche/format fit	25%	Do they already do opening/unboxing/breaks/gambling content?	our <code>grade</code> + <code>fit_reason</code>
Engagement quality	20%	Real engagement rate (likes+comments ÷ followers), not size	scraped <code>avg_engagement</code>
Demographic correlation	20%	Audience age/geo/interest match to GemBreak's buyer	⚠️ enrich on contact (media kit / platform analytics)
Conversion intent	15%	Audience is buyers, not passive viewers (promo-code history, shopping content)	bio/link signals
Cost-efficiency	10%	Est. cost ÷ expected reach (CPM/CPA) — cheap + engaged wins	our <code>est_post_*</code>
Reachability	5%	Email > link > none	our <code>contact</code>
Authenticity/brand-safety	5%	Not spam/farm; disclosure-compliant	our stress-test flags

We already hold 6 of 7 inputs — the gap is **audience demographics** (age/geo/interest split), which isn't public. Capture it the moment a creator replies (request their media kit, or read it from TikTok/IG "audience" analytics they share) and lock VPS before any paid spend.

→ **Deliverable:** a VPS-ranked "Top Value Partners" list (I can generate v1 from current data on request; v2 after demographic enrichment). This is the master targeting list — **not** the raw follower ranking.

3. Campaign architecture — the seed-to-scale flywheel

SEGMENT → ACTIVATE (Affiliate) → MEASURE & TIER → AMPLIFY (Paid) → COUNCIL
cohorts promo code + link signups/sales whitelist winners top 5–10%

CRM pipeline stages (every creator is always in exactly one):

`Prospect` → `Contacted` → `Negotiating` → `Signed` → `Live (code active)` → `Performing` → `Amplified` → `Council`
plus side-states `Paused` / `Declined` / `Blocklist`. Automated triggers move records (e.g. `*first sale` → `Performing*`; `*≥N sales in 30d` → `Amplify candidate*`).

Cohort waves (from our lists):

- **Wave 1 — Warm winners:** Grade A/B breakers + case-opening creators with a contact (the ~403 START HERE). Highest fit; seed first.
- **Wave 2 — Gambling micro/mid:** proven gambling-content creators (risk-priced, code-first).
- **Wave 3 — Nano seeding army:** the 2,325 nano list — cheap/free product seeding for volume + UGC.
- **Wave 4 — Bridge & mega (selective):** watch×gambling crossover + on-target 1M+ for reach spikes.

4. The two commercial models

Model A — Affiliate / Promo (default; ~80% of creators, all nano)

- **Reward = dual trigger:** a **signup bounty** (fixed \$ per new registered player) **+ a pack-sale commission** (% of pack revenue from their code) — so they earn on both awareness and purchase.
- **Unique promo code** (e.g. `ERIC15`) + tracked link. Code gives the *creator's audience* a small perk (bonus pack / deposit match) — this lifts conversion and makes attribution clean.
- **Tiered commission** (climbs with performance):

Tier	Trigger	Signup bounty	Pack-sale commission
Starter	default	\$X / signup	10%
Performer	≥25 sales/mo	\$X+ / signup	15%
Elite	≥100 sales/mo or Council	premium	20% + bonus pool

- **Attribution:** 30-day window, **first-touch or multi-touch** (credit the creator who introduced the player). **No upfront cost** — pure performance.

Model B — Paid / Hybrid (top-VPS creators; ~20%)

Layered on top of an affiliate code:

1. **Flat content fee** (recalibrated bands: nano \$100–300 · micro \$175–900 · mid \$600–2,000 per cross-posted video).
1. **Whitelisting/usage rights:** **+25–30%** of base for a 30-day paid-amplification window.
2. **Performance bonus** tied to *your* payoff (e.g. **+\$500–1,000 if a video clears 1M views or N code redemptions** — self-funding, like the Eric deal).
1. **Amplification:** license the winning organic video → run as **TikTok Spark Ad / Meta Partnership Ad from the creator's handle. Only videos that already over-index organically get ad spend.**

5. Outreach system (owned by Atlas)

- **Segmented, multi-touch, personalized — never spray-and-pray.** Each cohort gets its own sequence and offer.
 - **Sequence (per creator):** T+0 intro (personalized to their recent content + niche) → T+3 value/proof follow-up → T+7 offer specifics (code + terms) → T+12 last touch → recycle to DM if no reply.
 - **Personalization tokens** pulled from our dataset: `name`, `platform`, `niche`, `fit_reason`, recent-post reference, proposed `promo_code`.
 - **Domain hygiene:** send from a **warmed secondary domain** (not the primary), authenticated (SPF/DKIM/DMARC), capped volume/day to protect deliverability.
 - **Throughput target:** 40–75 personalized first-touches/day → ~250–400/week; at ~8–12% reply and ~30–40% of replies signing, that's **~15–30 new affiliates/week**.
-

6. Negotiation playbook

• **Price guardrails** = the recalibrated bands (\$4). Atlas may **auto-agree within band**; anything **above band, or any flat fee > \$1,000, or any exclusivity request** → **escalate to PA/you**.

• **Levers (in order to give)**: bigger promo-perk for their audience → tier bump → performance bonus → whitelisting fee → small flat fee. **Hold the line on**: no large upfront to unproven creators; affiliate code always attached; disclosure required.

• **Walk-away**: if a nano/micro demands >2× band flat with no performance component, decline warmly and keep in nurture.

• **Escalation matrix**: Atlas handles Model-A affiliate signups end-to-end; **PA + you approve every Model-B paid deal and all ad spend.**

7. Team operating model — you, PA, Atlas (Hermes), Leo (OpenClaw)

- _Assumed capabilities (confirm/correct): **Atlas = Hermes email agent** → inbox, outreach sequences, reply handling, in-band negotiation, scheduling. **Leo = OpenClaw agent** → browser/computer-use
- automation → operating web dashboards (affiliate platform, ad managers), generating promo codes, pulling Spark-Ad auth codes, uploading creatives, scraping performance, updating the CRM, DM outreach where email is missing._

Function	You	PA (human)	Atlas (email)	Leo (browser)
Strategy, budget authority	A/R	C	I	I
Prospect list / cohorts	A	R	C	R (enrich/scrape)
Outreach & follow-up	I	C	R	C (DM fallback)
Affiliate negotiation (Model A)	I	C	R	I
Paid deal negotiation (Model B)	A	R	C	I
Promo-code + link creation	I	A	I	R
CRM pipeline updates	I	C	C (email side)	R (dashboard side)
Ad manager / Spark Ads setup	A	C	I	R
Performance reporting	A	R	I	R (data pull)
Contracts & signatures	A	R	C	I
Payments / commission payouts	A	R	I	C
Compliance / disclosure QA	A	R	C	C

A=Accountable, R=Responsible, C=Consulted, I=Informed.

Handoff automation (the "conveyor belt"):

`Atlas books a yes → Leo generates the promo code + tracked link → Leo creates the CRM record (Live) → Atlas emails the creator their code + assets → Leo watches the dashboard; on first sale flips record

to Performing → on threshold, Leo flags Amplify candidate → PA/you approve → Leo requests Spark code & launches the ad → weekly, Leo compiles the scorecard.`

8. Tech & tracking stack (minimal, integratable)

- **Affiliate/tracking platform** (promo code + link + commission tiers + payouts): e.g. Tapfiliate /

Refersion / PartnerStack / Social Snowball class. This is the system of record for Model A.

- **Promo-code + UTM convention:** one code per creator; UTMs on links for multi-touch attribution.
 - **Ad accounts:** TikTok Ads Manager (Spark Ads) + Meta Business Manager (Partnership Ads).
 - **CRM/pipeline:** a board (Notion/Airtable/HubSpot) mirroring the §3 stages, driven by Leo.
 - **Payments:** mass-payout rail (PayPal/Wise/Tipalti) for commissions; contracts via e-sign.
-

9. Compliance & brand safety (non-negotiable for a gambling-adjacent product)

- **FTC disclosure** on every post (#ad/#sponsored + clear language); bake it into contracts and QA

each live post (Leo screenshots; PA reviews).

- **Legal/brand-safety review** before launch — GemBreak is gambling-adjacent (loot-box/unboxing scrutiny). Age-gate creators' audiences (18+/21+ as required); avoid youth-skewing creators.

• **No fabricated "wins"** / no stacking creator packs with guaranteed grails (the Polymarket & mystery-box scandals are the cautionary tale). Authentic pulls only.

- **Fraud/leak monitoring:** watch for code-leak to coupon sites (cap those or new-customer-only), self-referral, and bot signups. Reserve the right to claw back.
-

10. Metrics & optimization

- **North star:** blended **CAC** and **ROAS**; secondary **cost-per-signup** and **cost-per-pack-sale**.

• **Per-stage KPIs:** outreach reply %, signup → live %, % of live creators with ≥1 sale, revenue per creator, organic → amplify hit rate, Spark-Ad ROAS.

• **Scale/kill rules:** creator with 0 sales in 30 days → nurture/pause; video >2× median organic conversion → amplify; Spark Ad ROAS <1.5 after \$X → cut; ROAS >3 → scale budget.

- **Cadence:** Leo compiles a **weekly scorecard**; monthly tiering review (promotions/Council).
-

11. 90-day rollout roadmap

Phase	Weeks	Focus	Key actions	Lead
0 — Infra	0–2	Stand up the machine	Affiliate platform + codes schema, ad accounts, CRM board, warmed domain, contract + FTC templates, legal sign-off	PA + Leo
1 — Seed	2–6	Affiliate flywheel on	Outreach Wave 1 (403 START HERE) + Wave 3 nano seeding; activate codes; first sales data	Atlas + Leo
2 — Tier & first amplify	6–10	Find & fund winners	Performance tiering; license top organic videos; launch first Spark/Partnership Ads; Wave 2 gambling	Leo + PA + you
3 — Scale & Council	10–13	Compound it	Scale winning ads; form Creator Council (top 5–10%); Wave 4 selective mega; systematize renewals	You + PA

Targets by day 90: ~150–250 active affiliates, 15–30 amplified winners, a 10–20 creator Council, and a measured blended CAC you can scale against.

12. Illustrative unit economics (fill with real GemBreak numbers)

- **Affiliate (Model A):** cost = commission only → $CAC = \text{bounty} + (\text{pack-commission} \times \text{sales})$. If bounty \$Y and commission 12%, a creator driving 40 pack-sales/mo at \$Z AOV costs you exactly $(40 \times \$Y) + (0.12 \times 40 \times \$Z)$ — **you never pay more than performance justifies.**
- **Paid (Model B):** budget only proven videos. Example: license a winner for \$500 + \$150 rights, put \$2,000 Spark spend behind it at 4× ROAS → \$8,000 attributed → blended CAC well below brand-handle ads.
- **Blend:** aim **70–80% of *budget* on affiliate/performance, 20–30% on amplifying winners** early; shift toward paid as you learn which creators/videos compound.

13. Immediate next actions (this week)

1. **Confirm agent roles** (Atlas/Leo capabilities as assumed in §7) and pick the **affiliate platform**.
 2. I generate the **VPS "Top Value Partners" v1** from current data (value-ranked, not follower-ranked).
 3. Build the **Atlas outreach pack**: 3 sequences (Wave 1 / gambling / nano) + personalization mapping from the dataset, wired into `ATLAS_OUTREACH_PLAN.md`.
1. Define the **commission schema** (bounty \$, tiers, attribution window) so Leo can create codes.
 2. PA + legal: contract template + FTC/age-gate sign-off.
- _This plan pairs with: `GemBreak_Influencer_Lists.xlsx` (targets), `PRICING_AND_DEALS_2026.md` (rate/deal benchmarks), `ATLAS_OUTREACH_PLAN.md` (outreach ops)._
