

GemBreak — AI Editor Content Engine (format-jacking, zero filming)

Compiled 2026-07-28. Rebuilt for an AI video editor, not human creators. The model: take a PROVEN viral format (brainrot sludge, shock hook, TTS story, satisfying comp) and inject a GemBreak pack-opening clip as the payload. No one films anything — the editor assembles from sourceable parts + your clip library. Each template is a repeatable recipe you can spin into 50 variants.

How the engine works

```
INPUT: a library of pack-opening clips (reveals, big pulls, reactions, near-misses, value stamps)
→ pick a TEMPLATE below
→ AI editor sources the parts (gameplay b-roll, TTS, trending audio, text overlays, stock)
→ assembles per the recipe, drops the pack clip in the marked slot
→ spins N variants (swap hook line / bg clip / audio)
→ post at volume; kill losers, put ad spend behind winners
```

The pack clip is never the whole video — it's the payoff/bottom-half/reveal. The viral *format* does the reach; the clip does the conversion.

The only hard rule: the text/TTS lines must sound HUMAN

The one thing that outs AI content is the words. Enforce this on every hook/TTS line:

- lowercase, blunt, a little broken. "turned my last \$40 into this" ✅ — "You won't BELIEVE what I pulled!" ❌
- no marketing voice, no "insane deal," no exclamation stacks, no "link in bio."
- if a line sounds like an ad, cut it. The visual sells; the words just stop the scroll.

TIER 1 — BRAINROT / SLUDGE (highest retention, run the most)

1. Split-screen sludge (the staple)

- MECHANIC: top clip = your reveal; bottom = hypnotic gameplay (Subway Surfers, Minecraft parkour, GTA ramps). Bottom half holds the scroll, top half pays off.
- PARTS: 1 pack-reveal clip (top), 1 loopable gameplay strip (bottom), captions auto-burned, trending sound low under.
- HOOK (0–2s, on-screen): `he opened one pack on his lunch break` → reveal hits ~3–5s in.
- PACK CLIP: top half, full duration.
- LENGTH 8–15s. VARIANTS: swap bottom clip, swap hook line, swap which pull.

2. Triple-stack sludge

- MECHANIC: 3 horizontal strips — reveal + gameplay + a satisfying strip (soap cut, kinetic sand). Overstimulation = watch-time.
- HOOK: `the middle one is the pull. keep watching` (misdirection).
- PACK CLIP: top or middle strip. LENGTH 10–15s.

3. "watch the left side" misdirection

- MECHANIC: two clips side by side; text says watch one, the pull pops on the OTHER — replays to catch it.
- HOOK: `watch the guy on the left` (pull is on the right).
- PACK CLIP: the un-pointed-at side. LENGTH 8–12s.

TIER 2 — TTS STORY (AI voice + clip payoff)

4. "\$X into this" glow-up

- MECHANIC: TTS reads a short come-up over the reveal + calm gameplay bg. The number is the hook.
- PARTS: TTS (TikTok "Jessie"-type voice), pack reveal, soft gameplay bg, captions synced.

- HOOK / TTS: *"took my last forty bucks, said one pack. this is what came out."* → reveal on the payoff word.
- PACK CLIP: the reveal lands on the last line. LENGTH 12–20s.

5. Fake Reddit story card + TTS

- MECHANIC: Reddit-card graphic reads on screen, TTS narrates, pack clip is the "and then this happened."
- HOOK / TTS: *"my roommate wouldn't stop talking about this pack site so i tried one to shut him up."* → pull.
- PACK CLIP: payoff at the story's turn. LENGTH 15–25s.

6. "down bad" list → redemption

- MECHANIC: TTS lists small Ls over b-roll, then the pack pull as the one W at the end.
- HOOK / TTS: *"lost my parlay. phone at 3%. down to my last forty."* → clean pull.
- PACK CLIP: the final beat. LENGTH 12–18s.

TIER 3 — SHOCK / RAGEBAIT (comment-farming = reach)

7. Shock-claim hook → hard cut

- MECHANIC: a claim that stops the scroll, immediate cut to the pull that proves it. People argue in comments.
- HOOK: *there's a real rolex in a \$40 pack and i can prove it* → cut to the watch pull.
- PACK CLIP: the proof cut. LENGTH 8–14s.

8. "this shouldn't be legal"

- MECHANIC: over the reveal, framing bait that invites "how is this allowed" comments.
- HOOK: *not sure how this is even allowed* → the pull + value stamp.
- PACK CLIP: under the text. LENGTH 8–12s.

9. Wrong-on-purpose ragebait

- MECHANIC: intentionally "wrong" caption/value to farm angry corrections; the reveal quietly corrects it. (Engagement from people who *have to correct you.*)
- HOOK: *a \$40 pack can't pull more than \$40 right* → then it pulls \$2,400.
- PACK CLIP: the correction. LENGTH 8–12s.

10. Bait-and-switch smash cut

- MECHANIC: starts as unrelated scroll-stopper (cooking, cleaning, a fight clip), then smash-cuts to the pull ~2s in.
- HOOK: something totally off-topic on screen → hard cut.
- PACK CLIP: post-cut. LENGTH 7–12s.

TIER 4 — FAKE SCREEN / TEXT STORY

11. iMessage argument overlay

- MECHANIC: animated text thread plays over quiet gameplay bg, resolves into the pull.
- HOOK / text: *"just do ONE pack" / "no" / "i'll venmo you the 40"* → cut to the pull.
- PACK CLIP: the payoff after the last text. LENGTH 10–16s.

12. Fake "you won" notification

- MECHANIC: a phone-notification/def-not-real popup animation stacks over the reveal for the dopamine ping.
- HOOK: notification sound + *pack opened* banner → reveal.
- PACK CLIP: under the banner. LENGTH 6–10s.

TIER 5 — RANKING / COUNTDOWN / LOOP (watch-time hacks)

13. "top 5 pulls this week" auto-comp

- MECHANIC: number stickers (5 → 1), fast-cut compilation of real pulls. Auto-generates weekly from the clip library.
- HOOK: *top 5 pulls on gembreak this week* → #5.
- PACK CLIP: all five slots. LENGTH 15–25s.

14. "wait for it" countdown bait

- MECHANIC: a progress/countdown bar builds tension over gameplay; the pull lands at 0.
- HOOK: *wait for the last one* + a ticking bar.

- PACK CLIP: at the 0 mark. LENGTH 8–15s.

15. Seamless loop

- MECHANIC: end frame matches the first frame so the video replays invisibly (crushes watch-time).
- HOOK: mid-action open that resolves back to the start pose.
- PACK CLIP: the loop core. LENGTH 5–8s.

TIER 6 — SATISFYING / ASMR

16. Satisfying comp splice

- MECHANIC: the clean reveal cut into a satisfying strip (soap cutting, slime, kinetic sand, pressure wash).
- HOOK: none / `wait for the pull` — visuals carry it.
- PACK CLIP: the satisfying beat. LENGTH 10–18s.

17. ASMR unbox

- MECHANIC: isolate the pack-clip audio (foam, click, reveal), macro shots, zero talking, soft beat under.
- HOOK:  / no text.
- PACK CLIP: full, audio-forward. LENGTH 15–30s.

TIER 7 — BEAT-SYNC / MEME EFFECT

18. Beat-synced pull montage

- MECHANIC: every pull cut to hit on a trending audio's beat. Pure rhythm + dopamine.
- HOOK: the sound itself is the hook (use a rising trend).
- PACK CLIP: multiple pulls on-beat. LENGTH 8–15s.

19. Zoom-and-emoji reaction meme

- MECHANIC: the "🔍😬" zoom-in effect + emoji stickers layered on the reveal moment.
- HOOK: `wait... is that-` with a zoom on the glowing item.
- PACK CLIP: the reveal, effect layered on. LENGTH 6–10s.

20. CapCut trending-template drop-in

- MECHANIC: whatever CapCut template is trending this week, pack clip dropped into the media slot. Fastest possible production.
- HOOK: inherited from the template.
- PACK CLIP: the template's clip slot. LENGTH per template.

Running it at scale (the AI editor's loop)

- **Clip library first.** Tag every pack-opening clip by type: `reveal · big-pull · near-miss · reaction · value-stamp · luxury`. The editor pulls the right type per template slot.
- **Batch 20–50/day.** Same clip × many templates × many hooks. Volume is the strategy — most die, a few pop.
- **Weekly auto-formats.** #13 (top-5) and #18 (beat montage) regenerate automatically from new clips.
- **Kill/scale.** Anything under a view floor dies; anything that pops gets re-cut into 3 more templates and put behind Spark-Ad spend.
- **Rotate sounds constantly.** The single biggest reach lever is riding a *rising* trending audio — refresh the sound pool every few days.
- **Keep the brand light.** Code on screen, name once. The clip converts; the format reaches. If it reads as an ad, it dies.

_Pairs with GemBreak_Video_Styles_Chart.pdf (why these formats win) and the pack-clip library._
